z/OS SRRAUDIT Dialog Management Procedures

Version 6, Release 53

27 January 2022

Developed by DISA for the DoD

TABLE OF CONTENTS

Summary of Changes

Revision Number	Document Revised	Description of Change	Release Date
V6R49	V6R48 (22 Jan 2021)	Removed Product STC data set panel for CSSMTP.	25 April 2021
V6R34	V6R33 (27 Oct 2017)	No changes to this document.	17 November 2017
V6R33	V6R32 (28 July 2017)	Added Product STC data set panel for CSSMTP.	27 October 2017
V6R28	V6R27 (22 April 2016)	Changed Vulnerability Questions to remove AAMV0016 request and add request for information to ACP00270.	28 October 2016

Initial Setup

For Sites That Run the SRRAUDIT Process

Modify: EXAMRPTS member in the SYS3.SRRAUDIT.CNTL, changing the following variables to refer to the correct data set names:

```
CNTL=SYS2.SRRAUDIT.CNTL
CAILIB=SYS2A.EXAMINE.CAILIB
CAICLIB=SYS2.EXAMINE.CAICLIB
CAIISPP=SYS2.EXAMINE.CAIISPP
CAIISPM=SYS2.EXAMINE.CAIISPM
CAIISPT=SYS2.EXAMINE.CAIISPT
CAIDBS1=SYS3.EXAMINE.CAIDBS1
CAIDBS2=SYS2.EXAMINE.CAIDBS2
```

Note: The above changes can be performed by starting the Dialog process and at the Application Option Menu selecting option B.

The Initial Setup messages and prompts appear only once during a TSO session. If the user enters this process and logs off of TSO and later logs on to TSO, the information will be requested again.

START: At the ISPF Option 6, type the following on the command line and press "Enter":

EXEC 'SYS2.SRRAUDIT.CNTL(SRR$TSO)'

You will receive the following panel prompts:

```
------------------- Security Readiness Review Self-Audit -------------------
SRR$TSO                         DIALOG Setup

The current system install library high level qualifier is:
     SYS2.SRRAUDIT

Type new HLQ:  _____

The current user library high level qualifier is:
     SYS3.SRRAUDIT

Type new HLQ:  _____

EXIT  (PF3) To end.        Press Enter to use current high-level qualifiers
```

Note: Use the defaults for each of the system install and user libraries. Press "Enter" to proceed to SRR$MAIN.

For Sites That Do Not Run the SRRAUDIT Process

Note: After uploading and creating the SYS3.FSO.*xxxx.mmmyyyy*.CNTL data set, the following steps can be performed. The high-level qualifier can be changed below.

Modify: EXAMRPTS member in the SYS3.FSO.*xxxx.mmmyyyy*.CNTL, changing the following variables to refer to the correct data set names:

CNTL=SYS2.SRRAUDIT.CNTL - Change to SYS3.FSO.*xxxx.mmmyyyy*.CNTL
CAILIB=SYS2A.EXAMINE.CAILIB
CAICLIB=SYS2.EXAMINE.CAICLIB
CAIISPP=SYS2.EXAMINE.CAIISPP
CAIISPM=SYS2.EXAMINE.CAIISPM
CAIISPT=SYS2.EXAMINE.CAIISPT
CAIDBS1=SYS3.EXAMINE.CAIDBS1
CAIDBS2=SYS2.EXAMINE.CAIDBS2

Note: The above changes can be performed by starting the Dialog process and at the Application Option Menu selecting option B.

The Initial Setup messages and prompts appear only once during a TSO session. If the user enters this process and logs off of TSO and later logs on to TSO, the information will be requested again.

START: At the ISPF Option 6, type the following on the command line and press "Enter":

EXEC 'SYS3.FSO.*xxxx.mmmyyyy*.CNTL(SRR$TSO)'

You will receive the following panel prompts:

```
-------------------- Security Readiness Review Self-Audit --------------------
SRR$TSO                            DIALOG Setup

The current system install library high level qualifier is:
    SYS2.SRRAUDIT

Type new HLQ:  _____

The current user library high level qualifier is:
    SYS3.SRRAUDIT

Type new HLQ:  _____

EXIT  (PF3) To end.         Press Enter to use current high-level qualifiers
```

Note: Ensure that both high-level qualifiers are changed to SYS3.FSO.*xxxx.mmmyyyy* or specify the correct high-level qualifiers for each of the system install and user libraries. Press the "Enter" key and proceed to SRR$MAIN.

Main Menu Panel

The following is the main menu. All panels from this point on will contain the Version/Release of the SRRAUDIT process using v.rr as the format (e.g., 6.12).

```
------------------- Security Readiness Review Self-Audit -------------------
                         Application option menu
 SRR$MAIN                                                    Version: v.rr
 Option ===>

          A - Authorized User Groups: Pre-Populate and Edit

          B - Update User PROC EXAMRPTS

          C - Review reports for Findings, User access & Dataset rules

          D – Products

          E - Vulnerability Questions

 EXIT   (PF3) To end.
```

The following table describes each option available for the Dialog primary screen:

Option	Description
A	Will display Review System Users and Provide Input to Pre-Population panel.
B	Will edit the SYS3.FSO.*xxxx.mmmyyyy*.CNTL(EXAMRPTS) or SYS3.SRRAUDIT.CNTL(EXAMRPTS) member (review and/or update Proc JCL).
C	Will display Administration Option Menu panel.
D	Will display the Product List panel.
E	Will display the Vulnerability Questions panel.
Exit/PF3	Exit Dialog process.

Authorized User Groups: Pre-Populate and Edit

Instructions on this page can be bypassed if the site has collected information from a previous run of the jobs and the collection of information that is contained within the Dialog data set. It is recommended that sites proceed to <u>Verify and Update Authorized User Groups</u> to update the Dialog User Groups. The following job must be run prior to initiating the Pre-Population process.

For Sites That Run the SRRAUDIT Process

Modify: CACJ051D member in the SYS3.SRRAUDIT.CNTL, customizing the Job card, ensuring that the USER=SRRAUDT is removed or replaced. If SYS3.SRRAUDIT.DATA data set exists, delete all of the JCL for the DATA DD statement in Step JSTEP010.

Submit: CACJ051D member in the SYS3.SRRAUDIT.CNTL after the above changes are completed. Upon successful completion of CACJ051D, proceed with the following steps to initiate the dialog process.

  If Step JSTEP020 returns a non-zero return code, review the contents of SYS3.SRRAUDIT.LISTUSER for error messages.

For Sites That Do Not Run the SRRAUDIT Process

Modify: CACJ051D member in the SYS3.FSO.*xxxx.mmmyyyy*.CNTL, customizing the Job card, ensuring that the USER=SRRAUDT is removed or replaced. Change the following variables to reference a high-level data set qualifier:

  // SET SRRINST=SYS2.SRRAUDIT
  // SET SRRUSER=SYS3.SRRAUDIT

  Both variables can specify the same high-level data set qualifier as shown in the following statements:

  // SET SRRINST=SYS3.FSO.*xxxx.mmmyyyy*
  // SET SRRUSER=SYS3.FSO.*xxxx.mmmyyyy*

   If SYS3.FSO.*xxxx.mmmyyyy*.DATA data set exists, delete all of the JCL for the DATA DD statement in step JSTEP010.

Submit: CACJ051D member in the SYS3.FSO.*xxxx.mmmyyyy*.CNTL after the above changes are completed. Upon successful completion of CACJ051D, proceed with the following steps to initiate the dialog process.

  If Step JSTEP020 returns a non-zero return code, review the contents of SYS3.FSO.*xxxx.mmmyyyy*.LISTUSER for error messages.

Upon completion of the above Job, start the Dialog process as specified in section Initial Setup. After selecting Option A, the following screen will appear.

```
------------------- Security Readiness Review Self-Audit -------------------
          Review Authorized Users and Provide Input to Pre-Population
 SRR$AUGR                                                    Version: v.rr
 Option ===>

            A - Browse list of all userids

            B - Enter selection choices for Pre-Population

            C - Verify and update Authorized user groups

         The accuracy/validity of the user groups is the
         primary responsibility of the site SA.  Pre-population
         Is only intended to populate the user groups based on
         Best Available Input Data and is never guaranteed to be
         100 percent accurate.

 EXIT  (PF3) to end.
```

The following table describes each option available for the Dialog primary screen:

Option	Description
A	This option will browse the list of all userids. This is a member created by the CACJ051D Job.
B	Enter selections for the authorized user pre-selection process.
C	Verify and/or Update Authorized User Groups, this is also noted as the Authorized users list.
Exit/PF3	Return to Application Option Menu.

Browse List of All Userids

Select Option **A**. This option will browse the ALLUSERS member in the Dialog data set.

The following is a sample of what the browse of ALLUSERS may look like. The information displayed below may be different depending on the ACP and the users defined to the system.

```
  BROWSE    SYS3.SRRAUDIT.DATA(ALLUSERS)             Line 00000000 Col 001 080
  Command ===>                                               Scroll ===> CSR

Option	Description
Exit/PF3	Return to Review System Users and Provide Input to Pre-Population Menu.

Enter Selection Choices for Pre-Population

Note: Pre-population of the Dialog information was done as a result of requests of all sites present at the TIM. This process in many cases populates the member with unauthorized users and can miss other authorized users. It is the Site's responsibility to edit and update each member in the dialog data set to verify that the information is accurate. Please maintain the accuracy of this data by removing any unauthorized users and adding any missing authorized users.

****************************** Bottom of data ******************************
```

This Screen or Panel gives the System SRRAUDIT Auditor a selection for seven options per line. If no selections are made on this screen, no users will be selected for the User Group.

Press "Enter" to process the entered selections and return to the SRR$AUGR screen.

Option	Description
Enter	Process selection items for each group of users; return to current menu selection.
Help/PF1	Displays the help panel for this process.
Exit/PF3	Return to Review System Users and Provide Input to Pre-Population Menu.

Enter Selection Choices for Pre-Population Help

The following continuous screen will be displayed.

```
------------------- Security Readiness Review Self-Audit -------------------
                    Pre-Populate Authorized User Groups
 SRR$POP                                                     Version: v.rr

 ENTER  To scroll forward.   PF3   To Exit/Return.
 PF11   To scroll forward.   PF10  To scroll backward.
                                                             More:     +
  Help documentation to create site Authorized User Groups

  For RACF:
  Enter a Group name or Attribute in the input fields.
  At least one field must be entered to generate a group list.
  Entering an attribute will also select group level attributes.
     Example: SPECIAL will select SPECIAL and GSPECIAL.

  For Top Secret:
  Enter a Profile name or Attribute in the input fields.
  At least one field must be entered to generate a group list.

  For ACF2:
  Enter a Privilege name in the input fields.
  At least one field must be entered to generate a group list.

  The process:
  The program will search the User list and add the ID to the
    Authorized group if a match is found.

  A Group or Profile name can be a partial name.
    Example:  Entering 'STC' will select groups STC, STCOMVS and WEBSTC.

  The program can be run multiple times to create missing groups or to replace
    an existing group.

  At least one field must be entered to generate a group list.

  End of document.
```

Option	Description
Exit/PF3	Return to Review System Users and Provide Input to Pre-Population Menu.

Verify and Update Authorized User Groups

To verify and update the authorized user groups, perform the following steps:

Select Option **C**. The following screen will appear:

```
------------------- Security Readiness Review Self-Audit -- Row 1 to 44 of 44
                  Verify and update Authorized user groups
 SRR$USR                                             Version: v.rr
 Command ===>                                         Scroll ===> CSR

  View or Update the Authorized user groups

```

With this screen, you may browse (B or S), update/edit (E), or view (V) the Authorized User groups. The Status column specifies whether the group exists in the Dialog data set. If the group does not exist, the Empty message appears in the Status column. Entries with the Status of "Empty" will have to be edited to add users for that group.

Option	Description
Enter	Refresh panel list.
Exit/PF3	Return to Review System Users and Provide Input to Pre-Population Menu.

Member Option	Description
B/S	Browse Selected member.
E	Edit Selected member.
V	View Selected member.

Update User PROC EXAMRPTS

Select Option **B**. This option will edit the EXAMRPTS member in the CNTL data set.

The following is a sample of what the edit of EXAMRPTS may look like:

```
EDIT       SYS3.SRRAUDIT.CNTL(EXAMRPTS) - 01.10           Columns 00001
00080
Command ===>                                              Scroll ===>

Review Reports for Findings, User Access, and Dataset Rules

This selection will display the Administration Option menu. This selection will provide information from information that has been processed during the SRRAUDIT process or the SRR review.

```
-------------------- Security Readiness Review Self-Audit --------------------
                        Administration option menu
 SRR$ADMN                                                    Version: v.rr
 Option ===>

           A - Review open PDI finding reports

           B - Browse current User access lists

           C - Browse data set SENSITIVE reports

           D - Edit STARTED TASK list

           E - Verify and update Authorized user groups

           F - Asset Definition Process

 EXIT  (PF3) to end.
```

Option	Description
A	Review a list of PDI members that are determined to be Open findings.
B	Browse a list of Authorized users; the members identify the data set grouping of the users.
C	Browse a list of Sensitive report members. The members contain all details on the access for the group.
D	Edit the Started Task member in the CNTL data set.
E	Verify and Update Authorized user groups.
F	Create the Asset Definition of the system.
Exit/PF3	Return to Application Option Menu.

Review Open / Not Reviewed PDI Finding Reports

This option will list any and all open PDI findings that were discovered during the SRRAUDIT process or an SRR Review.

Select Option **A**. The following is an example of a possible screen display:

```
------------------- Security Readiness Review Self-Audit -- Row 1 to 18 of 113
                    Open PDI / Not Reviewed Finding Reports
SRR$PDI                                                       Version: v.rr
Command ===> _____ Scroll ===> CSR

Asset Definition Process

This function is used to create and/or display the Asset Definition collected for a system.

Select Option **F**. The following is an example of a possible screen display:

```
------------------- Security Readiness Review Self-Audit -------------------
                         Asset Definition Process
SRR$ADMN                                                         Version: v.rr
Option ===> _____

                   Key Fields for Asset Definition Process.
  Host Name: TEST.DISA.MIL                    OS390 Sys ID: TEST
  Operating System: z/OS                      ACP: RACF
  Optional key field, the first 4 IP addresses, if available, are shown.
       127.0.0.1

                 Additional Fields for Asset Definition Process.
  Description:    SSOPAC19 Base/test
  Classification: 2     MAC:            2       Confidentiality: 2
  Status:         1     Use:            3
  Building:       xxxx
  Room:           _____
  Serial Number:  xxxxxxxxxxxx
  Barcode:        _____
  Make:           _____
  Model:          xxxxxxxxxx
  Manufacturer:   xxxxxxxxxx

EXIT (PF3) to end with no action.      CREATE to create asset file.
SAVE to save above information.
```

If the Host Name and/or IP addresses fields are blank, ensure the user running this process has a valid OMVS segment and home directory is defined to the system. Fields below the **Additional Fields for Asset Definition Process** are the only input fields besides Option on this screen. The following fields must have a value entered for the **CREATE** or **SAVE** options:

> Classification   –   0 - Secret, 1 - Confidential, or 2 - Unclassified
> MAC   –   0 - MAC I, 1 - MAC II, 2 - MAC III
> Confidentiality   –   1 - Public, 2 - Sensitive, 3 - Confidential
> Status   –   1 - Online, 2 - Offline
> Use   –   1 - Production, 2 - Support, 3 - Test/Development

Option	Description
Create	This option will create the XMLASSET data set and save the asset information in the Dialog data set.
Save	This option will save the asset information in the Dialog data set.
Help	Help for the Create Asset Definition process.
Exit/PF3	Return to Administration Option Menu.

Asset Definition Process Help

After the XMLASSET data set is created, follow the instruction specified in the **Download Created Asset** and **Importing Created Asset** steps in this help screen.

```
------------------- Security Readiness Review Self-Audit -------------------
                          Asset Definition Process
 SRR$ADMN                                                   Version: v.rr

 ENTER  To scroll forward.   PF3   To Exit/Return.
 PF11   To scroll forward.   PF10  To scroll backward.
                                                             More:   - +
  This Help is used to create a sites asset import file for the web based
  application that tracks asset vulnerabilities.

  Asset Information:

  The Key Fields and Optional key entries are collected from information
  available on the system.  The Additional fields can be filled in by the
  System/Security Administrator.  This panel will require that the following
  fields be specified:

    Classification, MAC, Confidentiality, Status, and Use.

  These fields require that specific values be specified.  The following is a
  list of the fields and the only values available:

    Classification:  0 - Secret, 1 - Confidential, or 2 - Unclassified
    MAC:             0 - MAC I, 1 - MAC II, 2 - MAC III
    Confidentiality: 1 - Public, 2 - Sensitive, 3 - Confidential
    Status:          1 - Online, 2 – Offline
    Use:             1 - Production, 2 - Support, 3 - Test/Development

  Commands Available for this process:

    END    - Escape process without creating or saving any information.
    CREATE - With the information provided, creates the Asset Definition
             dataset and saves the information that is entered on the screen.
    SAVE   - Saves the information that is entered on the screen only.

  Downloading Created Asset:

  The file created in this process can be downloaded and imported into the
  application that tracks asset vulnerabilities.  Use the following steps for
  downloading:

   1.  At the TSO ready prompt or the ISPF option 6.
   2.  Initiate the File Transfer Process to transfer from host to PC.
       (Receive Files From Host)
   3.  Enter the file CREATEd in this process in the Host-File Name enclosed
       in quotes.  (e.g.  'SYS3.FSO.MMD.XMLASSET')
   4.  Enter a file name, with an xml extension in the PC-File Name.
       (e.g.  d:\asset.xml)
   5.  Select Text for the Transfer Mode.
   6.  Under Options, specify ASCII only, over ASCII CRLF.
   7.  Save information and initiate the download process.

  Importing Created Asset Definition:
```

```
 The file created in this process after downloading, the file saved in 4.
 above can be imported into the application that tracks asset vulnerabilities.
 Use the following steps for downloading:

  To be determined at a future date.

 End of document.
```

Option	Description
Exit/PF3	Return to Asset Definition Process.

Product List

This function is used to identify the products that are available on the system. The information collected about a product will be used in the automation of the vulnerabilities for the product.

****************************** Bottom of data ******************************
```

The Condition indicates the status of the product. "Used?" is an indicator that the product has not been identified as being installed or not installed on the system. "Missing" is an indicator that additional information is required for the product.

Option	Description
Cancel	Return to Application Option Menu without Saving information.
End/Exit/PF3	Save information and return to Application Option Menu.
Enter	Refresh panel list.

Line Option	Description
N	Specifies that the Product is not available on the system.
Y	Specifies that the Product is available on the system.
S	Specifies that the Product is available on the system and proceed to additional screens.

At this screen, you can specify (N, Y, or S) on a product line. Specify (N) to indicate that the product is not available on the system. Specify (Y) to indicate that the product is available on the system. Specifying (Y) may produce a Missing condition that is resolved by specifying (S). Specify (S) to indicate that the product is available on the system. Specifying (S) will in most cases produce additional panels requesting specific information about the product.

An explanation of the Dataset Panel names:

Product Install Data Sets	Would normally have WRITE and/or greater access given to the System Programming staff.
Product STC Data Sets	Would normally have WRITE and/or greater access given to the Products Started Task userid or the Products batch userid as well as the System Programming staff.
Product User Data Sets	Would normally have WRITE and/or greater access given to specific groups of userids or all userids as well as the System Programming staff.
All Product Data Sets	Would normally have WRITE and/or greater access given to the System Programming staff but may have other user access requirements.

The following table identifies the additional panels that appear for possible request for information when specifying (S) for a product:

Product	Title	Panels

Dataset Help Panel

The following help can be used to assist sites in obtaining a list of data sets for requested Products and Vulnerability Questions. Dataset prefixes can be specified that do not obtain a data set list. An example is specifying **SYS2.SRRAUDIT.V**, which will not populate data set panel with any additional data sets. However, during evaluation, this will review all data set rules that use **SYS2.SRRAUDIT.V**.

```
------------------- Security Readiness Review Self-Audit -------------------
               Entering Data Sets and/or Data Set Mask/Prefix Help
 SRRMPROD                                                 Version: v.rr

 ENTER  To scroll forward.   PF3   To Exit/Return.
 PF11   To scroll forward.   PF10  To scroll backward.
                                                         More:     +
 Typing over a current data set line.

 1.  Current line before overtyping.

 _ SYS2.TEST.DATA.SET.NAME_____

 2.  Current line after overtyping.

 _ SYS2.TESTING.DATASET.NAME_____

 3.  Lines after pressing enter key.

 _ SYS2.TEST.DATA.SET.NAME_____
 _ SYS2.TESTING.DATASET.NAME_____

 How to enter the data sets and/or data set mask/prefix.

 1.  Specifying a data set name.

 _ SYS2.TEST.DATA.SET.NAME_____

    The above data set must be unique to return a specific data set.

 2.  Specifying a data set mask, use one of the following examples.

 _ SYS2.*.CAILIB_____

    The above will return all data sets with the first qualifier
    of SYS2 and a third qualifier of CAILIB upon pressing the enter
    key.  The resulting list will contain data set with three or more
    qualifiers.

 _ SYS2.CA1_____

    The above will return all data sets that begin with SYS2.CA1 as
    the first and second qualifiers.  This will not retrieve
    SYS2.CA1ABA.DATASET, for the second qualifier is not CA1.  To
    obtain this data set specify SYS2.CA1* in the above prompt.

 3.  Specifying a data set prefix, use the following examples.

 _ SYS2.CA1._____
```

```
   The above will not return any data sets.  It can be used as a place
   holder for several data sets.  Remember the period '.' at the end of
   the prefix.  Also, do not specify this with any sort of mask.  (example:
   SYS3.CA1.V*.)
```

Option	Description
Exit/PF3	Return to any of the many data set request panels.

Compuware Abend-AID Panels

STC JCL Location

The following panel appears for Compuware Abend-Aid. Specify the member and data set location of each Compuware Abend-Aid Product STC and/or Batch job on this system. The data set can specify the actual or an alias of the data set.

```
------------------- Security Readiness Review Self-Audit ---- Row 1 to 1 of 1

Vulnerability Questions

This function is used to provide the evaluation of vulnerabilities that require Yes/No answers. The following panel is an extended list of the Vulnerability Questions currently collected.

Note: It is recommended that the ISSO review the questions for each of the following STIG IDs.

```
------------------- Security Readiness Review Self-Audit ---- Row 1 to 9 of 9
                          Vulnerability Questions
SRRMPROD                                                    Version: v.rr
Command ===> _____  Scroll ===> CSR
  Commands:  CANCEL - Exit without saving information
             EXIT/END/PF3 - Ends and saves information
  Line command:  Y - Yes
                 N - No
  Y/N column: Y=Yes, N=No, Y?=Yes Missing information
========================================================================
  STIG Id   Y/N Vulnerability Question
_ AAMV0012      Is unsupported system software install and active on the
                system?

_ AAMV0400      Is there an automated process in place to collect and
                retain SMF data for this system?

_ ACP00110      Does the System LINKLIST contain application and/or
                user loadlibs?

_ ACP00190      Are there SMF dump/backup datasets on this system?

_ ACP00210      Are there system DASD backup datasets on this system?

_ ACP00270      Does software product require access to dynamic LPA updates?
                It must be validated with the appropriate STIG or SRG and
                receive documented and filed authorization from the site ISSM.

ACP00110

The following panel appears for STIG ID ACP00110. Specify the data set names of application and/or user LINKLIST data sets. Specify the actual or alias of the data set or specify the data set prefix or data set mask. If data set prefixes or data set masks are used, ensure that any data sets not associated with application and/or user LINKLIST data sets are deleted.

```
------------------- Security Readiness Review Self-Audit ---- Row 1 to 1 of 1
                              ACP00110
SRRMPROD                                            Version: v.rr
Command ===> _____ Scroll ===> CSR
  Commands:  CANCEL - Exit without saving information
             EXIT/END/PF3 - Ends and saves information
  Question: Does the System LINKLIST contain application and/or
            user datasets?

  Line command:  D - Delete entry
  Enter the data set names of application and/or user LINKLIST loadlibs.
